Summary

Question

# Inclusivity and Gradual Learning

- We want to build confidence for all students through gradual, structured learning
- Familiar material for experienced developers serves as refinement and perspective-sharing
- Help in reflecting real-world collaboration where diverse teams work together
- Encourages mutual support between **experienced** and **novice** peers

# Software Product Design and Development I

High Quality Software

Flexible

Reusable

Maintainable

Collaboratively

## 7 – 8 developers / team project

**Agile methodology:** Development delivers frequent, small software updates, enabling teams to quickly adapt to changes and continuously improving the product based on feedback.

# Minimum Viable product (MVP)

- During the DP we will focus on developing an MVP
- An MVP is the minimal thing that you can do to test a value hypothesis and gain learning and understanding
- MVP is focus on learning, not delivery
- Let us explain an MVP with an example using Agile developmemnt

# Minimum Viable product (MVP)

## Customer wants a red car

- Customer got exactly what they asked for
  - the dev team was just following a plan.
  - Increments were not useful.
- Team does not understand the value of MVP

- Customer got what they desired
  - Worked iteratively with the dev team.
- Developed something a little bit different but it's closer to what the customer really wanted.
- Giving the customer what they really want is the main purpose of delivering an MVP.
- A minimal viable product is a tool for learning.

# Client Projects

Project

Groups

FAQ

Presentations

Client Projects

SD Competition

Choosing a **client-sponsored project** gives your team the opportunity to work with real stakeholders who provide requirements, feedback, and direction throughout the semester. This allows you to focus your energy on *design and development* while still benefiting from client input during implementation.

In contrast, teams that create their own custom projects must define requirements from scratch—sometimes leading to unrealistic or less engaging "virtual client" scenarios. By working with a client, you gain the added benefit of **clearer goals, real-world constraints, and professional collaboration** that mirror industry practice.

Review the opportunities below and consider selecting a client project that aligns with your team's interests and career goals.

- Novel Gamified Digital Commerce Platform for consumers at Casinos
  - [Project Details](#)
  - [Video of the project](#)
- Estimarmine
  - [Project Details](#)
- Farcaster Mini-App Development Project
  - [Project Details](#)
- \*I am expecting more projects. I will update as they become available. Please check back soon.\*\*

# Why Choose Client Projects?

- Client projects come with **real requirements** and **ongoing feedback**.
- Don't worry if the **tech stack is new**.
- Working with a client gives you:
  - **Professional collaboration experience** with real stakeholders.
  - A chance to **showcase applied learning** to employers.
  - A more **impactful capstone project** you'll be proud to put on your résumé.

## Farcaster Mini-App Development Project

### Required Baseline Skills

All students must demonstrate proficiency in:

- Basic HTML/CSS/JavaScript
- Version control with Git/GitHub
- Command line basics
- Static site deployment (Vercel/Netlify)
- Effective use of LLMs for development assistance

### Skills to be Developed

- React and TypeScript

- Farcaster protocol and mini-app constraints
- API integration and database management
- Web3 fundamentals
- Pair programming and agile methodology
- Project leadership and stakeholder communication

“People-related factors tend to be the greatest challenges—not technology.”

George Spafford,  
Senior Director Analyst  
at Gartner

# Survey Results – Team Challenges

Qn.6: Please rank the following challenges that could have impeded effective teamwork.

Qn.7: If your ranking for "Others" in Qn.6 above was 4 or 5, kindly provide us what it represents.

[R2]. **Others** -- People simply not doing work. We only had **about half of our group** contribute anything meaningful to the project. The half of the group that were not participating made it hard for the group to progress collaboratively.

# What is social coding?

## Concatenate query strings of queries/search types properly when exporting.

### #14284

**Merged** dennisoelkers merged 5 commits into `master` from `fix/issue-14268` 2 weeks ago

**Note:** This needs to be backported to 4.3 and 5.0.

#### Description

#### Motivation and Context

This PR is fixing an issue related to exporting a search type. When both the search type and the query contain query strings, they are being concatenated, by simply combining them with an `AND`. For simple query strings this works, but it changes the logic for more complicated ones (e.g. when query string1 is `foo OR bar` and the second is also `foo OR bar`, the resulting query string `foo OR bar AND foo OR bar` has a different meaning, due to the stronger binding of the logical AND.

With this PR, concatenating two query strings wraps them in braces too, so `foo OR bar` concatenated to itself ends up as `(foo OR bar) AND (foo OR BAR)`, which returns the same, correct results.

Fixes [#14268](#).

#### How Has This Been Tested?

#### Screenshots (if appropriate):

#### Types of changes

- ☒ Bug fix (non-breaking change which fixes an issue)
- ☐ New feature (non-breaking change which adds functionality)
- ☐ Refactoring (non-breaking change)
- ☐ Breaking change (fix or feature that would cause existing functionality to change)

#### Checklist:

- ☒ My code follows the code style of this project.
- ☐ My change requires a change to the documentation.
- ☐ I have updated the documentation accordingly.
- ☒ I have read the **CONTRIBUTING** document.
- ☒ I have added tests to cover my changes.

# Issue Tracker - GitHub

The screenshot shows the GitHub interface for the Microsoft/TypeScript repository. At the top, there's a navigation bar with the GitHub logo, a search bar, and links to Explore, Gist, Blog, and Help. Below this, the repository name "Microsoft / TypeScript" is displayed, along with statistics for Watch (142), Star (1,564), and Fork (82). The main section features tabs for Issues, Pull requests, Labels, and Milestones. A search bar with the filter "is:open is:issue" and a "New issue" button are also present. The issues list shows several open issues, with the third issue, "Enable strictFunctionTypes", highlighted by a red box. This issue is marked as a "Breaking Change" and has 190 comments. Other issues include "Request to expose zeroType, emptyStringType and isTypeAssignableTo" and "Compiler incorrectly caches module resolution".
