

Pre-conditions Report Grading Rubric

CS 789 - Software Reengineering

Milestone 1 | 15 points (5 team + 10 individual)

Team		Student	
------	--	---------	--

The project instructions define the required activities; the report template defines how they are reported. Grade against the evidence submitted for this milestone. Team points are shared; individual points are assigned separately to each student.

Team Component [5 points]

Criterion	Pts	Full-credit evidence	Score
Team and project setup	1.0	Team/repository information is complete; target/source variants are correctly identified; individual ownership and collaboration are clear.	
Reengineering strategy and workflow	1.5	Scope, Definition of Done, common workflow, and initial OORP patterns/maxims form a coherent plan across the four PR categories.	
PR allocation	1.0	All assigned PRs are listed and correctly distributed: 1 Category 1, 2 Category 2, 1 Category 3, and 3 Category 4 per student.	
Coordination process	1.0	Weekly meeting cadence, shared minutes, Discord coordination, progress tracking, and early blocker escalation are established.	
Consolidated team plan	0.5	Team identifies high-risk PRs/components, shared issues, and any schedule adjustments while preserving individual ownership.	
Team Component subtotal	5		

Individual Component [10 points]

Criterion	Pts	Full-credit evidence	Score
Independent baseline validation	2.0	Student independently demonstrates a working baseline for linkedin/kafka:3.0-li, with environment, commit, build/test results, and concise attributable evidence.	
Preliminary analysis of all 7 PRs	3.0	All seven assigned PRs are inspected at a preliminary level with purpose/change, affected files/components, initial observations, and planned approach.	
Repository and initial design understanding	2.0	Student identifies merge commits/changed files, relevant history, affected source components, corresponding target areas, and obvious source-target differences.	
Risk, effort, and prioritization	1.5	Student distinguishes straightforward, difficult, and exceptional cases, prioritizes work, and provides a reasonable effort assessment.	
Planned techniques and patterns	1.5	Student identifies relevant lab techniques/tools	

Criterion	Pts	Full-credit evidence	Score
		and OORP patterns and explains why they are appropriate for the assigned PRs.	
Individual Component subtotal	10		

Scoring guidance

Full credit requires technically sound, traceable, and appropriately explained evidence. Award partial credit in proportion to completeness and quality. Team points are shared; individual points are assigned separately. A technically unsuccessful integration or LLM experiment can earn full credit when the required process, verification, evidence, and analysis are complete and well reasoned.

Component	Maximum	Score
Team	5	
Individual	10	
Total	15
